the 1990s, the number of people in the world who are undernourished has declined by 100 million, and the number of people who are malnourished has declined by 200 million.

There are a number of reasons for this decline. One is that the world has become more affluent. As a result, more people are able to afford to eat a more varied and nutritious diet.

Another reason is that the world has become more technologically advanced. As a result, more people are able to produce more food, and the food is more nutritious.

There are also a number of other factors that have contributed to the decline in undernourishment and malnutrition. These factors include improved agricultural practices, increased access to food, and improved health care.

Despite these successes, there is still a long way to go. There are still 800 million people in the world who are undernourished, and 1 billion people who are malnourished.

It is important that we continue to work to reduce undernourishment and malnutrition. This can be done by improving agricultural practices, increasing access to food, and improving health care.

There are a number of ways that we can improve agricultural practices. These ways include using more efficient fertilizers, using more efficient irrigation systems, and using more efficient pest control methods.

There are also a number of ways that we can increase access to food. These ways include building more roads, building more markets, and building more storage facilities.

Finally, there are a number of ways that we can improve health care. These ways include providing more people with access to health care, providing more people with access to clean water, and providing more people with access to sanitation.

By continuing to work on these issues, we can ensure that everyone in the world has access to a nutritious diet.

There are a number of organizations that are working to reduce undernourishment and malnutrition. These organizations include the United Nations, the World Bank, and the World Health Organization.

It is important that we continue to support these organizations. This can be done by providing them with financial support, providing them with technical support, and providing them with political support.

By working together, we can ensure that everyone in the world has access to a nutritious diet.

There are a number of challenges that we face in our efforts to reduce undernourishment and malnutrition. These challenges include the need for more resources, the need for more political will, and the need for more coordination.

Despite these challenges, we must continue to work to reduce undernourishment and malnutrition. This is one of the most important goals that we have as a global community.

By working together, we can ensure that everyone in the world has access to a nutritious diet.
