the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture, by using more water, or by using more fertilizers and pesticides.

Another way to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques, by using better seeds, or by using better irrigation systems.

There are many ways to meet the world's growing demand for food and other resources. It is up to us to decide which way is best.

One of the most important things we can do is to make sure that we are using resources wisely. This means using less water, using less land, and using less fertilizer and pesticides.

Another important thing we can do is to make sure that we are using food wisely. This means eating less meat, eating less processed food, and eating more fruits and vegetables.

There are many other things we can do to help meet the world's growing demand for food and other resources. It is up to us to decide which things we want to do.

One of the most important things we can do is to make sure that we are using resources wisely. This means using less water, using less land, and using less fertilizer and pesticides.
